Test Name	Result	Unit	Ref. Interval
-----------	--------	------	---------------

SARS-Cov-2 RNA Qualitative PCR (COVID-19)

Covid-19 RT PCR- SARS COV-2	NEGATIVE
-----------------------------	----------

Method: Real Time PCR (BIORAD CFX 96)

Sample Type:Nasal & Oral Swab

Interpretation:

NegativeRNA	specific to SARS-CoV-2 not detected
PositiveRNA	specific to SARS-CoV-2 detected
Inconclusive recommended	This could be due to low viral load in the sample. A retesting on a fresh sample is for confirmation.

Note:

ICMR Registration number for COVID 19 is RACADIAPLGUH

Negative result does not rule out the possibility of Covid 19 infection. Presence of inhibition, mutations and insufficient RNA specific to SARSCoV-2 can influence the test result.

Kindly correlate the results with clinical findings.

Test is conducted as per kits approved by ICMR.

Kindly consult referring Physician/authorized hospitals for appropriate follow up.

This is a qualitative test. The Ct values do not provide a measure of viral load due to inherent variability in sampling and kits. According to ICMR guidelines Ct values should not be used to assess the severity of the disease
